These towns account for a population of 45,338 thousand out of a total population of 54,336 thousand in the

country in 435 towns, each having a population of 30,000 and over.  
In 273 towns having a population of 35,752 thousand in Group I, where registration is comparatively more complete; 21,063 births and 7,370 deaths were recorded giving a birth rate of 30·6 and a death rate of 10·7 per thousand of population. The rates registered in the various States are as follows:

The table given below shows the annual vital rates for each of the years 1957-61 for all municipal towns, each with population 30,000 and over based on the final yearly data. The corresponding annual rates for 1961 and various periods in 1962 compiled from the weekly figures, which were published from time to time in this Supplement, are also shown to draw attention to their possible use in tracing current trends.

Appropriate adjustments in the population base were made in cases, where the data for any town could not be included. The rates for States not shown are much too deficient for being presented. Even the data for the States, which are

shown are deficient to a varying degree. Efforts have to be made to improve the completeness.

The two sets of rates for 1961—one based on the annual returns and the other on weekly returns—are presented to give an idea of the extent of variation between the final and the weekly figures. The two agree closely in the case of Gujarat, Punjab and Orissa only, otherwise for other States the difference is quite appreciable. However, the rates for all the eight States combined agree fairly well showing that, perhaps with emphasis on the improvement of the completeness of State figures, they may help in a study of current trends.
